

SUNSCREEN CHEMICALS AND MARINE LIFE

How sunscreen chemicals enter our environment:

The sunscreen you apply may not stay on your skin.

When we swim or shower, sunscreen may wash off and enter our waterways.

How sunscreen chemicals can affect marine life:

Chemicals in sunscreens that can harm marine life:

Oxybenzone, Octinoxate, Octocrylene, Benzophenone-1, Benzophenone-8, OD-PABA, 4-Methylbenzylidene camphor, 3-Benzylidene camphor, nano-Titanium dioxide, nano-Zinc oxide

GREEN ALGAE: Can impair growth and photosynthesis.

CORAL: Accumulates in tissues. Can induce bleaching, damage DNA, deform young and even kill.

MUSSELS: Can induce defects in young.

SEA URCHINS: Can damage immune and reproductive systems, and deform young.

FISH: Can decrease fertility and reproduction, and cause female characteristics in male fish.

DOLPHINS: Can accumulate in tissues and be transferred to young.

How we can protect ourselves and marine life:

Seek shade between **10 am & 2 pm**, use Ultraviolet Protection Factor (UPF) sunwear, and choose sunscreens with chemicals that don't harm marine life.

Seek shade: 10am to 2pm

Umbrella

Sun hat

UV Sun glasses

Sun shirt

Leggings
